# Web Ontology Language: OWL

In order to describe the connection method as a formal inference system (in section 4), and the positive matricial normal form used in it, we will briefly describe the notation we use for first order logic, before examining the method. We are presuming readers to be acquainted to first order logic.

## 1.1 Definition 1 (First-order logic syntax).

The alphabets given by table 1 compose the FOL syntax notation. ? Table 1. First order logic syntax notation.
